To whom it may concern,

The PAs in Virtual Medicine and Telemedicine provided an Introduction to Telehealth Medicine lecture to a cohort of 60 didactic year students in February 2026. The presenter, Hina, was well informed on the topic and it was well received by the students.

The lecture was delivered virtually, which can be a challenge for most presenters, but not for Hina. She was able to keep the group engaged throughout the session. She utilized “lead clinicians” from the cohort to promote participation as the student worked through a case by gathering information from the patient.

The format of cases with clinical pearls peppered throughout worked well. Hina’s style allows the students to be invested in their learning as they aid the lead clinician when needed. The zoom chat was appropriately utilized for students to share ideas including differential diagnoses, adding to and developing the students ability to critically analyze information.

As an instructor, I appreciated the ease of working with PAs in Virtual Medicine and Telemedicine. Hina is well organized and communicates well. I would recommend this lecture to others seeking an introduction to telemedicine.

Thank you!
